- The diagram illustrates the iterative process of a decision tree. It shows three levels of nodes, each represented by a horizontal bar divided into segments. The process starts with a root node (10 segments) and branches into two child nodes (5 segments each). The left child node further branches into two more child nodes (3 segments each). The process continues, with nodes being labeled 'Approve' or 'Reject' based on the outcome of a decision. The final node is labeled 'Cust' (Customer).
